

Oversight Committee

Minutes of Regular Meeting: July 24, 2012

ATTENDANCE AT MEETING: Theldon R. Branch, III, Chair - **Present** Ann Lents, Vice Chair – **Present** Frances Castaneda Dyess, Working Group Chair – **Present** Dwight Boykins, Working Group Chair - **Present** Edward Taravella - **Present** C.P. "Chip" Bryan – **Present** Bert Keller, Working Group Chair – **Present** Gilbert Herrera, Working Group Chair - Absent Jeff Ross, Working Group Chair - **Present** Council Member Oliver Pennington - **Present**

1. Call to Order / Welcome

Chairman Theldon Branch called the meeting of the ReBuild Houston Oversight Committee to order at 10:34 a.m.

2. Approval of the Minutes

Mr. Jeff Ross made a motion to postpone approval of the June 26, 2012 minutes. Motion carried.

3. C.I.P. Process Manual

Mr. Dale Rudick distributed a hard copy of the draft *CIP Process Manual*, Version 3.0 dated July 18, 2012 along with a Summary of Significant Revisions since the previous version. Mr. Rudick stated that Version 3.0 was posted on the <u>www.ReBuildHouston.org</u> website late last week and that the distributed copy is for the committee members to review and digest at their leisure. One of the significant changes in this latest version responds to the Committee's February 7, 2012 formal action as it pertains to the benefit/cost methodology to be utilized in the prioritization of candidate projects. Chairman Theldon Branch requested the members to review the document and invited their comments. The chairman stated that if it is the pleasure of the committee he would ask PWE to be available at a future meeting to go over the primary changes.

Ms. Lents suggested e-mailing the document to others who might be interested in receiving the link. It was suggested for members to forward any e-mail addresses to Mr. Rudick if they wanted them to be included in the e-mail distribution.

4. Executive Report

Mr. Rudick stated that PWE is appreciative of the Oversight Committee's commitment to ReBuild Houston and, as a result, felt it was important to respond to Committee's resolutions approved on May 22, 2012. A memorandum dated July 20, 2012 (attached) from Director Krueger to Chairman Branch was distributed to the Committee members. With consideration of each one of the Committee's three segments of the resolution, the response lists the department's intentions for each of the three segments.

A second memorandum to the Chairman dated July 17, 2012 (attached) was distributed. This memo was from Mr. Rudick on the subject of the Neighborhood Street Reconstruction (NSR) petition process. The Director, at the last meeting, offered to forward a list of received petitions that were not in the CIP and would not be placed in the CIP unless they were needs driven (worst first). The memorandum provides some of the history of the NSR program and the transition to where we are today. Council member Pennington asked if the number of future local projects would be increased to help offset the NSR petitions not programmed. Mr. Rudick responded that the number of local residential street reconstruction projects will only increase as past debt is paid off and ad valorem revenue for new projects becomes available.

The subject of street overlays was raised including how determinations are made to overlay local streets as well as thoroughfares and collectors. Chairman Branch said that perhaps we could bring in the staff members in the future to provide a clearer definition in how overlay projects are selected. Mr. Ross asked what the legal definition of an overlay was with respect to a capital investment. The Chairman asked Mr. Ross to formally write up his question and to submit to Mr. Rudick on behalf of the committee for a response.

August 14, 2012 is the scheduled date for the next Transportation, Technology & Infrastructure (TTI) Council Committee meeting. It is anticipated to take the FY 2018-2022 "+5 Plan" to the Committee prior to formal Council consideration. Council Member Pennington advised the committee that he will not be at the August TTI Committee meeting. The Chairman stated that it would be at the discretion of Chairman Noriega as to delay the presentation until the September TTI meeting. Update: Council Member Noriega decided to delay the "+5 Plan" presentation to the TTI Committee until Mr. Pennington is available to participate in the discussion. The June 30, 2012 exhibit illustrating the Drainage Utility Fee Collections and Expenditures as of June 30, 2012 was distributed. It has been placed on the web. Ms. Lents asked if we could get some simple realistic revenue projections for the ReBuild Houston funding sources. Mr. Rudick responded that should not be a problem.

Next regular meeting will be on August 28, 2012 at 10:30 a.m. in the Mayor's Conference Room in City Hall.

5. Old Business/New Business

Mr. Ross referenced the Street Surface Assessment Vehicle (SSAV) presentation made available to committee members on July 13, 2012. He stated it was a good meeting. He brought up the fact that the SSAV measures the Pavement Condition Rating by roughness, rutting and cracking. Because most of the 80% weighted score for the Needs Assessment for thoroughfares and collectors is attributed to the PCR, it would be worthy of more explanation.

6. Public Comments

Donald Perkins asked if the NSR information would be available to the public. It was stated it would be a part of the approved minutes and posted on the ReBuild Houston website.

7. **Adjourn:** Time 11:59 p.m.

Motion to adjourn made by Ms. Lents and seconded by Ms. Castaneda Dyess at 11:59 a.m. Motion carried.

| To: | Theldon Branch, Chair ReBuild Houston Oversight Commitee | From: | Daniel W. Krueger, P.E. Director | |
| | ľ | Date: | July 20, 2012 | |
| c: | Dale A. Rudick, P.E. | Subject: | REBUILD HOUSTON OV COMMITTEE RESPONSE TO MAY 22, | |

The ReBuild Houston Oversight Committee approved 3 resolutions at their May 22, 2012 meeting. The Public Works and Engineering Department (PWE) greatly appreciates the input of the Committee and takes this opportunity to formally respond to the resolutions. With extensive staff consideration of each resolution, PWE has developed the attached responses that convey our intentions with specific actions to fulfill the resolutions. The responses are provided to the Committee to support further discussion as may be appropriate for the Committee's purpose.

Again, thank you for your time and your commitment to the City. Should you have any questions, please do not hesitate to contact me or Dale Rudick.

RHOC Resolutions, May 22, 2012, and PWE Responses

Resolved, that the Rebuild Houston Oversight Committee welcomes the development of a city-wide fact-based need assessment system as described in the Capital Improvement Plan Process Manual for Infrastructure Programs (Jan 2012 draft). The Committee also recognizes the Public Works & Engineering Department's express undertaking that the need assessment system will be subject to routine review to continually improve the system and the data it relies on. The Committee's review confirms that incomplete data and assumptions on use of data have impacted identified needs in some respects. The Committee recommends that a small group of senior level PWE executives be assigned to oversee a "field test" of the results of the model's need identification prior to submission to the public and to Council each year. This "field test" should 1) look for data updates on identified need areas (such as construction or overlays since pavement evaluation completion); 2) look for anomalies in the results, and 3) look for indications that the model needs to be changed. A report of observations and recommendations for changes in the need area list, for changes to the model for further investigation should be provided to the Director. the Mayor and the Council, and the Oversight Committee. Adjustments in the results of the needs assessment may be made, with explanation of each, prior to submitting projects for pre-engineering.

The Department of Public Works & Engineering (PWE) notes that the Committee welcomes city-wide fact-based need assessment system and appreciates the advice of the Committee regarding completeness and use of data.

PWE would again clarify that the improvements the Department is advancing with **ReBuild Houston** include the synthesis and analysis of the broadest extent of available data that is relevant to measurement of the adequacy of existing infrastructure to stated level of service standards. Beyond currently existing and available data, the Department is acquiring new data through use of state-of-the-art technologies for such measurements as pavement condition with our Street Surface Assessment Vehicle, or assessment of street ponding based on processed LIDAR (Light Imaging Detection and Radar) data. The Department's use of data to support the overall recommendation and delivery of discrete capital improvements is outlined in the **Capital Improvement Plan Process Manual** Version 2.0, January 18, 2012, available at http://www.rebuttostonorg/downloatk/@process.ment2012_01_18_versio_2pdf. While there are a number of potential efforts that the Department could undertake to expand the extent of citywide comprehensive information that may be relevant to the planning and programming procedures outlined in the Manual, we recognize that any study or measurement requires resources of both funds and time, and that such efforts must be judiciously considered as investments, as well. We welcome the continued advice of the Committee as we consider such efforts.

Needs identification facilitated through the SWEET is intended to be as objective as possible. The result of need identification, prioritized in subsequent analysis, will be either assignment for pre-engineering of solutions or not. Should the Oversight Committee in making their recommendation, or the Council in considering for approval, consider that an identified priority need area is not worthy of pre-engineering evaluation, the Department would not expend resources to develop a project(s) for the needs in that area. However, absent such political decision by the Council, the Department would not intend to subjectively vacate an area that fits the overall definition and extent of needs per the methodology.

With consideration of the Committee resolution, the Department intends to:

- Develop a quality plan, inclusive of both quality control and quality assurance for every citywide data collection effort (study/measurement) to be undertaken. This will include measures and checks for completeness of data.
- 2) Further refine the data management strategy for data sets/layers that constitute the .shp input for the SWEET analysis and further communicate to the Committee this data management practice so that the Committee would better understand and have greater confidence in the overall completeness and quality of data.

Resolved, that the Process Manual and the needs assessment system should be modified for FY 2014 to include Safety (vehicular and pedestrian) as a Prioritization and Weighting factor for Major Thoroughfares and Collectors, Local Streets, and intersections, and that a similar factor be considered for Sidewalks. Currently street needs are based on pavement condition and on street motor vehicle capacity, as judged by current traffic and by compliance with the Major Thoroughfare Plan. See Tables 2.2, 2.3, and 2.4 and Section 3.6. PWE deals with safety issues as a priority, but this consideration is outside the articulated needs assessment model. The Committee recommends that data sets reflecting safety for both a variety of vehicles and for pedestrians be developed for inclusion in the SWEET model for the next practical fiscal year, 2014.

PWE confirms the importance of safety in our public infrastructure and appreciates that the Committee has noted the Department's focus on that important area. Additionally, PWE appreciates the advisement of the Committee toward further improving the Manual as a foundational body of thought that can be refined and improved.

PWE would clarify that all infrastructure improvements are engineered, whether under the Department's oversight or review and approval, to meet or exceed applicable standards of safety that are contained within various codes and guidelines applicable to the infrastructure feature and function. When the use of infrastructure may degrade the existing condition, the Department addresses deficiencies on a demand driven (e.g. 311) or a program driven (e.g. periodic inspection) basis so that the infrastructure condition is returned to safe, or at least improved with mitigation of any hazard pending further action to include reconstruction. We would also note that needs are not" judged", but measured and compared using the SWEET.

PWE would also comment that needs have been defined within the Manual as where infrastructure in its existing condition does not meet level of service standards. To consistently address safety as a need among other needs, a level of service standard would need to be developed. Infrastructure deficiencies that include safety issues are addressed responsively through demand and program driven maintenance. As a result, the Department does not agree that safety is a need parameter but that safety can be a factor in project prioritization. In order to provide a comprehensive and objective city-wide data set for project evaluation and prioritization, we will yet need to establish the data set and collect data, and lastly to yet integrate the data base/layer into SWEET as the synthesis and analysis tool.

With consideration of the Committee resolution, the Department intends to:

- Establish an initial safety layer for City streets that utilizes established National Highway Traffic Safety Administration (NHSTA) fatality accident data. The Department will confirm, but currently understands that such data includes both motorist and pedestrian fatalities. For the Committee's information, the latest NHTSA map for Harris County is attached. Please note that many of the fatality accidents within the city limits are located on the state and federal highway system versus city thoroughfares, collectors, or local streets.
- Incorporate project prioritization weighting into the Manual based on comprehensive city-wide safety data.
- Evaluate the level of effort and commensurate costs to acquire non-fatality accident data from HPD and assemble such into a usable data base/layer; consider new data acquisition prior to FY14 budget submission.

Resolved, that the Committee recognizes that needs identification simply highlights areas of structural and mobility flooding and of potentially impaired driving and that both (1) analysis of potential solutions through pre-engineering and (2) project prioritization are critical before actual projects can be undertaken. The Committee will undertake analysis of project prioritization once Public Works' development of a cost-benefit approach is complete and information of this process is available to the Committee. See Draft Process manual Sections 3.4-3.6.

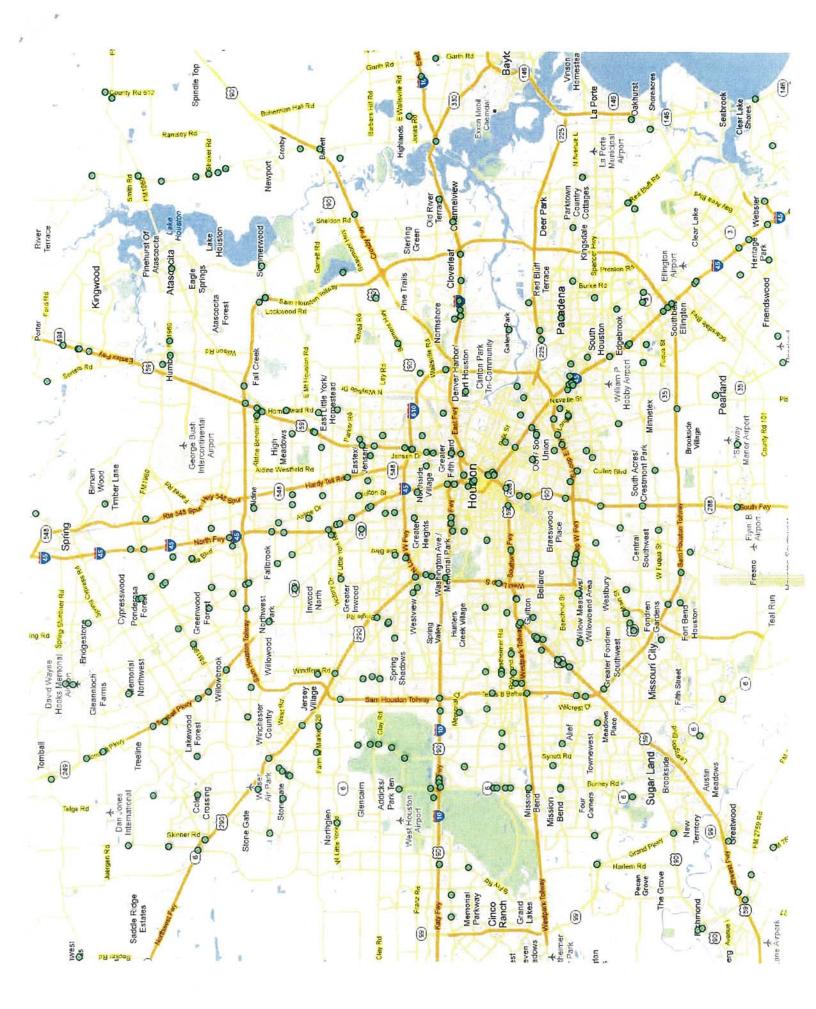

PWE would understand this resolution builds upon an action by the Oversight Committee on February 7, 2012 to accept the *Capital Improvement Plan Process Manual* Version 2.0, January 18, 2012, with comment calling for adding a definition in the evaluation of cost and benefit. Such refinement has always been envisioned by the Department and is currently underway.

PWE would clarify that the methodology presented in the manual is being refined in phases in concert with annual cycles of the CIP preparation and adoption. With the FY13-17 CIP preparation, the Department refined the planning process and executed the first iteration of need identification and prioritization so that the requirement for the 10 year plan could be met. While the updated 5-year CIP has continued to progress previously initiated projects into construction phase, no new projects were programmed in the FY13-17 CIP.

With consideration of the Committee resolution, the Department intends to:

- Prior to the development and submission of the FY14-18 CIP and updated "+5 Plan", the Department will refine the methodology for project prioritization and programming in Version 3.0 of the *Capital Improvement Plan Process Manual*.
- 2) With conclusion of an extent of pre-engineering, as assigned from the FY18-22 "+5 Plan" priority need areas, compete candidates projects and implement the project prioritization and programming methodology for the first time using a benefit/cost analysis.

PWE appreciates the guidance and counsel of the Committee and looks forward to further discussing these particular issues as well as other issues relating to project priorities and process.

Subject: NEIGHBORHOOD STREET RECONSTRUCTION (NSR) PETITION PROCESS

In response to the ReBuild Houston Oversight Committee's request for information at the June 26, 2012 meeting regarding the Neighborhood Street Reconstruction (NSR) petitions not programmed into the CIP, attached is the following:

- March 15, 2011 Memorandum on the NSR Petition Process
- List of NSR streets petitioned

As discussed as the meeting, the NSR program started out as a cost-share program. Afterwards, the City decided it would not charge an assessment for the street reconstruction which served as an inducement for more petitions.

The attached NSR petition list indicates which streets were petitioned but haven't been programmed in the CIP. The attached March 15, 2011, explains the transition from NSR to ReBuild Houston's "worst first". NSR was a demand driven program; ReBuild Houston is a needs driven program. The *CIP Process Manual* outlines the need driven, objective methodology now being utilized for future CIP local street project selection.

When NSR petitions were received, letter responses from the department typically stated that reconstruction would be based on the Pavement Maintenance and Management Program (PMMP) ratings (predecessor to the current Pavement Condition Rating, PCR) or proposed utility or drainage improvement work along the petitioned street. The response letters did not commit to reconstruct the street on a specified schedule. Letters are on file and are available for review.

Also, as discussed, the NSR petitions were received on a block by block basis and not uncommonly isolated from adjacent petitioned blocks. This method was not conducive to a holistic approach for reconstruction. It prevented optimum drainage design within a neighborhood and resulted in more fragmented approach to utility replacement.

Should you have any questions, please do not hesitate to let me know.

Subject: NEIGHBORHOOD STREET RECONSTRUCTION PETITION PROCESS

As we work to Rebuild Houston we will utilize objective criteria to identify needs and develop candidate projects for the drainage as well as the street and traffic program, to include the local residential street component. The neighborhood street reconstruction (NSR) petition process has been instrumental for years in providing a means of community input for neighborhood street needs. The process has not, however, been inclusive to all of the City's citizens or all of our local street needs.

With the implementation of Rebuild Houston, we will discontinue this prior petition process. As CIP's for the next few years are brought forward for adoption, Public Works and Engineering will continue to progress and recommend funding for completion of all NSR projects for which the City has made a prior commitment in the Capital Improvement Plan (CIP) up through FY15. Where future years reflect start of design for NSR projects, we will recommend a program of construction funding so the projects can be completed as soon as practicable. Community input for Local Residential Streets will be received similar to other infrastructure needs (311, CIP Meetings, etc.)

We will yet have streets that have been petitioned but not scheduled. Also, some neighborhoods have previously initiated petition efforts that are in progress. PWE will continue to accept petitions through the end of this fiscal year to allow those who have started the process to reach completion. All substantiated petitions, meeting the minimum submission criteria, will be accepted. The age of accepted petitions for any street within a future project area will be part of the overall criteria when prioritizing future candidate projects. As previously discussed, any existing or pending street paving assessment will be recommended for cancellation.

If you have any questions or need further information please contact Daniel R. Menendez, P.E., Deputy Director, at 832-395-2201.
